

THE FUTURE OF BIOADJUVANTS

EVIDENT is a revolutionary, biological adjuvant for crop protection products and fertilisers. Unlike many other, often synthetic, spreading agents EVIDENT is 100% natural. It also distinguishes itself from other biological spreading agents in that its production processes are not based on plant-based oils such as palm oil. EVIDENT is a unique product that is the result of 100% natural fermentation, making it a fully environmentally friendly product to produce and use. EVIDENT has excellent deposition and spreading qualities that enable optimal efficacy of your crop protection products and foliar fertilisers in and on the plant.

USAGE OF EVIDENT

EVIDENT has no hazard classification and has proven to be safe for all tested crops, including tulip, lily, cucumber and apple. EVIDENT can also be applied to many other crops. If you have no previous experience with the product, we recommended a test spray to determine whether the crops and/or varieties to be treated respond well to the product, as well as to combinations with various crop protection products.

EFFECTS OF EVIDENT

EVIDENT works similarly to other spreading agents. It reduces the surface tension of the liquid and thus ensures a better distribution on the plant, thereby improving the efficacy of crop protection products and fertilisers. It also prevents residue and results in a thinner layer of liquid on the crop, allowing it to dry more quickly.

Various tests have shown the effectiveness of EVIDENT on many crops. These tests also revealed that EVIDENT is completely safe for both crop and user (processor). It allows crops to dry more quickly, avoids growth inhibition and improves the long-term effects of crop protection products and fertilisers.

BENEFITS OF EVIDENT

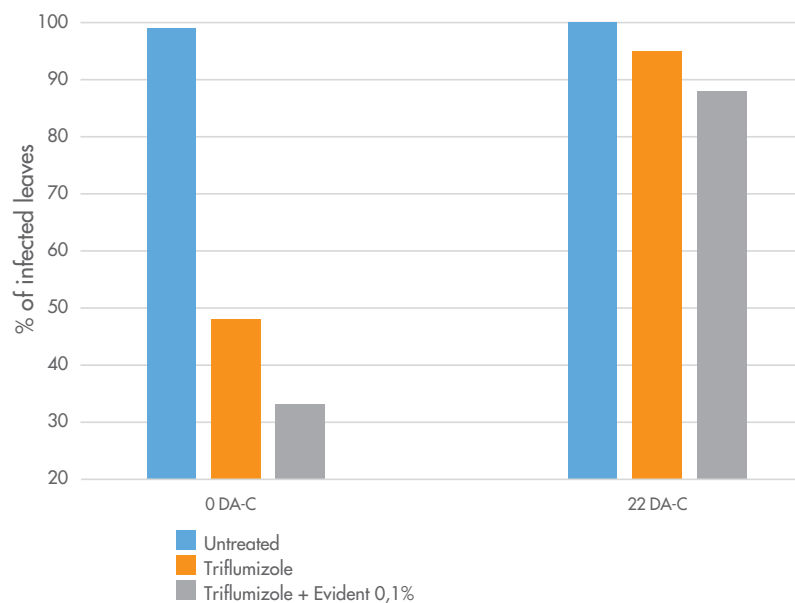

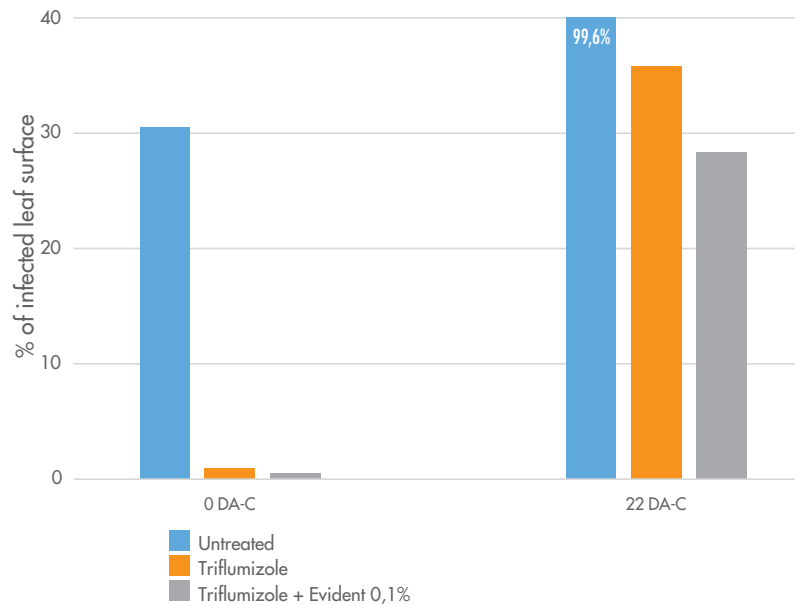

- Optimises the efficacy of crop protection products
- Improves foliar coverage and distribution, regardless of hairiness or wax
- Shorter drying time of spray liquid (lower weather dependency)
- Improves absorption and availability of trace elements
- Increases rain resistance
- Can be easily mixed with (cold) water and biological or chemical crop protection products and fertilisers
- Reduces amount of required spray liquid per hectare (cost reduction)
- Less to no visible residue
- Higher reliable result of fungicide and insecticide spraying
- Safe and 100% biodegradable
- Not harmful to humans, animals, plants or the environment.

CASE STUDY

EVIDENT: the best adjuvant for disease control in cucumber

Experimental design:

- Crop: Cucumber
- Water volume: 1500L/ha
- 3 treatments
- Treatment interval: 7 days
- AI: triflumizole 150/g (dosage: 0,1%)

DOSAGE

0,1% of spray liquid (100ml/100L water)

PREPARATION OF SPRAY LIQUID

1. Prepare spraying liquid completely
 2. Mix in the required amount of EVIDENT.
- Decrease mixing capacity of mixing pump to prevent foaming

STORAGE

Do not store EVIDENT in the chemicals locker. EVIDENT retains its effectiveness for two years, provided the bottle is closed airtight and stored in a cool (3°C - 9°C), dark place.

DISCLAIMER

Our EVIDENT user advice, both oral and written, is based on the best knowledge at the moment. The most recent advice and tests are on our website. However, it is not possible for us, based on this notice, to accept liability for use, as we cannot control various factors during storage, transport, application and use of products delivered by us. Read and follow the instructions on the packaging before use.
